On this date, Ellis Saad called me to ask if us or EPA had been on the site today (Friday) or yesterday (Thursday). I told him we had not but I did not know about EPA. EPA had been in town Wednesday. He said that someone had unlocked the gate on the property and had left his lock out of the loop. They had to cut the chain. He wanted us to know that our lock was now out of the loop so we would need to call him for access (or plan on cutting the chain again). He offered to give us a key to his lock. I told him tentative plans were to be on-site August 1 and that EPA would most likely be contacting him soon. He also said that most of the equipment on-site would be gone by the 15th, he was selling it. I said I didn't know if that would be soon enough but some kind of prior contact would be made. I also told him about the meeting held Wednesday at Grassmere with EPA, the State and the Steering Committee to help finalize the Work Plan for this phase of work.

Ellis gave me his beeper number if we (EPA) could not contact him at home; 835-1467.
